## Plans and pricing

### Beginner: Free!

A **limited account** with one web app at `your-username.pythonanywhere.com`, restricted outbound Internet access from your apps, low CPU/bandwidth, no IPython/Jupyter notebook support.

It works and it's a great way to get started!

Create a Beginner account

### Education accounts

Are you a teacher looking for a place your students can code Python? You're not alone. Click through to find out more about our [Education beta](#).

Once you have signed up and signed in, then you want to go ahead and start adding some files. So upload the files from the automated birthday wisher app:

[Send feedback](#) [Forums](#) [Help](#) [Blog](#) [Account](#) [Log out](#)

### All Web apps

You don't have any web apps.

Open Web tab

pythonanywhere  
by ANACONDA.Dashboard Consoles **Files** Web Tasks Databases

/home/ andy489

[Open Bash console here](#)0% full – 196.0 KB of your 512.0 MB quota [More Info](#)

## Directories

Enter new directory name

New directory

.cache/

.ipython/

.local/

.virtualenvs/

**letter\_templates/**

## Files

Enter new file name, eg hello.py

New file

|                      |  |                  |           |
|----------------------|--|------------------|-----------|
| .bashrc              |  | 2025-05-12 07:05 | 560 bytes |
| .gitconfig           |  | 2025-05-12 07:05 | 266 bytes |
| .profile             |  | 2025-05-12 07:05 | 79 bytes  |
| .pythonstartup.py    |  | 2025-05-12 07:05 | 77 bytes  |
| .vimrc               |  | 2025-05-12 07:05 | 4.6 KB    |
| README.txt           |  | 2025-05-12 07:05 | 232 bytes |
| <b>birthdays.csv</b> |  | 2025-05-12 07:15 | 168 bytes |
| <b>main.py</b>       |  | 2025-05-12 07:15 | 1.3 KB    |

Upload a file

100MiB maximum size

Now we must go to our Consoles and create a new bash console:

pythonanywhere  
by ANACONDA.Dashboard **Consoles** Files Web Tasks DatabasesCPU Usage: 0% used – 0.00s of 100s. Resets in 23 hours, 49 minutes [More Info](#)

## Start a new console:

Python: [3.13](#) / [3.12](#) / [3.11](#) / [3.10](#) / [3.9](#) IPython: [3.13](#) / [3.12](#) / [3.11](#) / [3.10](#) / [3.9](#) PyPy: [3](#)

Other: **Bash** / [MySQL](#)

Custom: [+](#)

## Your consoles:

You have no consoles. Click a link above to start one.

Type "python 3 main.py". You might see an `smtpplib.SMTPAuthenticationError`. This is something that happens because our python program is trying to login to our email and our email provider, in this case Google, is actually blocking it. Copy the show url "<https://support.google.com/mail/answer/78754>" and paste it into the address bar. Click into the

"<https://www.google.com/accounts/DisplayUnlockCaptcha>". Repeat the command in the console in the cloud.

To setup a scheduled task go to "Tasks" tab:

[Send feedback](#) [Forums](#) [Help](#) [Blog](#) [Account](#) [Log out](#)

 **python**anywhere  
by ANACONDA.

[Dashboard](#) [Consoles](#) [Files](#) [Web](#) **Tasks** [Databases](#)

CPU Usage: 4% used – 4.01s of 100s. Resets in 22 hours, 57 minutes [More Info](#)

### Scheduled tasks

Server time: 08:07 UTC

Daily, at  :  UTC   [Create](#)

| Frequency              | Time | Command | Description | Expiry | Actions |
|------------------------|------|---------|-------------|--------|---------|
| You have no tasks yet. |      |         |             |        |         |

The server time is based on UTC.
